

- 2 outputs: 1 powered output, 1 isolated relay output (can be switched to second powered output)
- RS232 interface when using USB cable to connect to camera*

external devices via MOBOTIX cameras; RS232 interface, connection to camera using USB or 31.321-004 EN 08/2015

*Only use MOBOTIX USB cables! USB cables are not part of the delivery and are to be ordered separately!

Function	Option 1 – USB	Option 2 – MxBus
2 signal inputs, self-powered	✓	✓
1 powered output 12 V	✓	✓
1 isolated relay output (can be switched to powered output 12 V)	✓	✓
RS232 interface	✓	_
Connecting additional MxBus devices to MX-232-IO-Box	_	✓
Length of the connection to the camera	0,5/2/5 m (1.6/6.6/16.4 ft)*	Max. 100 m/110 yd

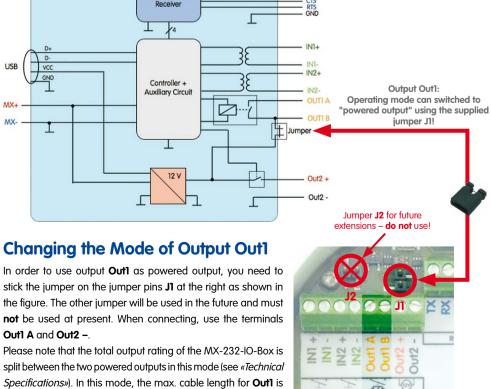

USB Cables for Connection to Camera*

Options for Connecting to Cameras

	MX-CBL-MU-STR-05/2/5 (straight/straight)	MX-CBL-MU-EN-STR-05/2/5 (angled/straight)	MX-CBL-MU-EN-PG-STR-05/2/5 (angled/straight)		
MOBOTIX USB cable 0.5/2/5 m (1.6/6.6/16.4 ft) (order separately!)		T	-		
MOBOTIX cameras	D14/D15, S14/S15	M24/M25, Q24/Q25, T24/T25	D24/D25		
*Only use MOBOTIX USB cables! USB cables are not part of the delivery and are to be ordered separately!					
Technical Specifications					
	C	Option 1 – USB	Option 2 – MxBus		

Interface to camera	USB	MxBus		
Inputs	2 galvanically separated inputs (AC/DC, self-powered, up to 50 V)			
Output Out1	Isolated relay output (AC/DC, up to 50 V/60 W/2 A) With jumper J1: Powered output 12 V, max. cable length 50 m/55 yd (see "Changing the Mode of Output Out1")			
Output Out2	Powered output 12 V, max. cable length 50 m/55 yd			
Total output rating	400 mW	500 mW		
RS232 interface	Rx, Tx, RTS, CTS, GND, max. 115 kbaud	_		
Cross-sectional diameters of wires at the terminals	Minimum: 0.14 mm² (AWG 26) Maximum: 0.5 mm² (AWG 20)			
Protection class	IP65 (DIN EN 60529)			
Operating temperature	-30 to +60 °C/-22 to +140 °F (DIN EN 50155)			
Power supply	USB	MxBus		
Power consumption	Typically 1 W			

I

also 50 m/55 yd.

1. Attach the box

Installation Instructions

pointing downwards (torque 0.4 Nm). Next, remove the box cover (three screws). 2. Establish connection to the camera

Option 1 – USB

Remove the slim sealing ring of the straight plug of the USB cable*.

- Pull the delivered blue sealing ring over the plug, so that the smaller
 - opening points into the same direction as the plug's contacts. - Remove blue bayonet catch of the MX-232-IO-Box and pull out
 - the blue plug. - Plug the USB cable with attached sealing ring into the MX-232-IO-Box
 - Connect the USB cable to the camera (→Camera Manual). Option 2 - MxBus
 - Before proceeding, make sure there is no voltage on the MxBus

and secure the cable using the blue bayonet catch.

wires!

(see figure at right).

- Cut the supplied or existing MxBus wires to size (2-wire, 0.6 to 0.8 mm diameter). When using wires without jacket, strip the insulation of
- When using a *cable with jacket*, remove the pre-installed eight-wire plug and insert the appropriate cable plug (3 to 5 mm or 5 to 7 mm). Press the rubber plug into the casing in such a way that the rims stick out equally on both sides. Push the cable through the plug. remove the jacket on a length of 15 mm and strip the insulation of the wires for about 5 mm.

Connect the MxBus wires to the terminals of the MX-232-IO-Box

using the screwdriver. Make sure to maintain the polarity (see sticker

- Connect the MxBus wires as described in the corresponding manual to the MOBOTIX camera or to another MxBus module connected to a camera (e.g. KeypadRFID, DoorMaster). Make sure not to exceed

the overall length of the MxBus wiring of 100 m/110 yd.

3. Connect the peripheral devices Connect the other wires/cables as required and by using the corresponding cable plugs (inputs, outputs, RS232, MxBus).

in front of the terminal).

Insert one or two cable ties depending on the attached cables as shown. Pull the cable ties tightly around the cables in order to provide strain relief.

5. Mount the cover Mount the cover back onto the MX-232-IO-Box and affix it using the cover

screws (torque 0.4 Nm).

1. Open the MOBOTIX camera's user interface in the browser

http://<camera IP address>

Initializing the MX-232-IO-Box

- 2. Make sure that the camera uses PoE class 3 Open the Admin Menu > Ethernet Interface dialog.
- follow the steps of the wizard and activate Power over Ethernet (Class 3). 3. Activate MX-232-IO-Box
 - Option 1 USB: In the line MX-232-IO-Box USB, click on Connect. Option 2 – MxBus:
 - If the LED icon in the line MxBus Interface is not green, click on Connect. In the Admin Menu > Manage MxBus Modules dialog, Devices section, MX-232-IO-Box line, click on the Activate button.

Open the Admin Menu > Manage Hardware Expansions dialog.

- 4. Configure events (when using the signal inputs/outputs) Open the Setup Menu > Event Overview dialog.
 - In the **Signal Events** section, click on **Edit** and set the parameters as required (open the help page for this dialog by clicking on \mathfrak{C}). You can now use the new events in the Setup Menu > Action Group Overview dialog (see the help page for this dialog by clicking on 🕙).
- 5. Configure RS232 interface (only when using Option 2 USB)
- 6. Store the camera configuration

Resetting the MX-232-IO-Box

need to reset the connected and activated MX-232-IO-Box to factory defaults: Remove the box cover (three screws). Bridge the contact surfaces below the Factory Reset label (red circle in figure)

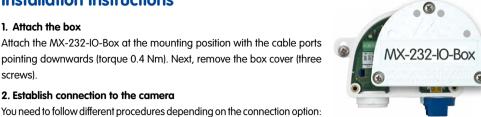

detaching, the left LED (MxBus status) may blink red after establishing the MxBus connection. In this case, you

 Set up the MX-232-IO-Box in the camera (see «Initializing the MX-232-IO-Box»). **Notes**

using a screw driver, for example (both LEDs are flashing red/blue with increasing

- Torque for all screws: 0.4 Nm. Press the white cable plug (eight-wire plug or cable plug 3 to 5 mm or 5 to 7 mm) into the casing in such a
- Cross-sectional area of the MxBus wires: 0.6 to 0.8 mm (0.8 mm recommended to reduce line losses). Do not use jumper J2; it will be used for future extensions of the MX-232-IO-Box.

If Power Supply has not been set to Power over Ethernet (Class 3), click on the Change link,

If the Update SW button appears in this line, click on it to update the software of the module.

- Open Admin Menu > Serial Interface > Setup and configure the parameters in the Serial Interface and **Modem** as required (see the help page for this dialog by clicking on ?).
- In the Live screen of the camera, click on Admin Menu > Configuration > Store, permanently store the camera configuration and reboot the camera.

• Save the camera configuration to the local computer (Admin Menu > Configuration > Save).

If the MX-232-IO-Box had been connected to a different camera before and not deactivated or reset before

• Only remove the bridge if both LEDs of the MX-232-IO-Box are flashing green on/off 3 times to indicate that the process has finished successfully. Mount the cover back onto the box (torque 0.4 Nm).

- The MOBOTIX MX-232-IO-Box is to be used only for providing signal inputs/outputs and an RS232 interface (only when connecting to a camera using USB) for MOBOTIX cameras in IP65 environments. For MOBOTIX cameras with MxBus connector and software version MX-V4.1.4.11 or higher. Make sure that you adhere to all relevant laws, regulations and that you fulfill all certification requirements
- The max. baud rate of the RS232 cable depends on the cable length and on the cross-sectional area of the wires. The length of the entire MxBus wiring must not exceed 100 m/110 yd.

way that the rims stick out equally on both sides.

for the intended use.
